

Snake Sightings Workflow

User Guide

The Taylor Ashe Antivenom Foundation (TAAF)

Powered by Ecoscope · Wildlife Dynamics

This guide walks you through getting access to EcoScope, configuring, and running the Snake Sightings Workflow — which processes iNaturalist snake observation data from EarthRanger and produces distribution maps, a species summary table, and a structured Word report.

Overview

The Snake Sightings Workflow connects to EarthRanger, fetches iNaturalist snake observation events within a user-defined time range, and produces a complete distribution analysis with maps, a summary table, and a printable Word report.

The workflow produces:

- An **All-Species Distribution Map** — every verified observation with a convex-hull range overlay.
- An **Observation Effort Map** — 15 km grid coloured by total observation count.
- A **Species Richness Map** — 15 km grid coloured by number of unique species per cell.
- A **Species Summary Table** — counts, observers, locations, date ranges, and range area per species.
- Per-species distribution maps — one interactive map and PNG per species, generated dynamically at runtime.
- A **Word Report** (taaf_snake_distribution_report.docx) with all maps, the summary table, and per-species pages.
- An **Interactive Dashboard** with all map widgets and the sortable summary table.

Getting Started with EcoScope

EcoScope is a free, open-source data analytics and reporting platform that turns conservation data into action. You can use it as a **web app** in any browser or install the **desktop app** on your computer. Access is by request — follow the steps below to sign up.

A Request an EcoScope account

Submit the sign-up form — each request is reviewed individually by the EcoScope support team. Once your account is ready you will receive login instructions by email.

Fill in: **Email Address**, **Organization**, **EarthRanger Site**, **Country**, and **Contact Name**.

Sign-up form: https://docs.google.com/forms/d/e/1FAIpQLSep4xDWIOWx_IXoK4wDaQJyPHGO_vNW5bjlh1f5DEo8S6QjNw/viewform

Once your account is active, choose how you want to access EcoScope:

Option	URL	Best for
Web App	app.ecoscope.io/login	Quick access from any browser — no installation needed
Desktop App	app.ecoscope.io/download	Faster performance and offline capability — recommended for running workflows

B Download and install EcoScope Desktop (recommended)

Go to app.ecoscope.io/download and download the installer for your operating system (macOS or Windows). Run the installer — no additional configuration is required.

Launch **EcoScope Desktop** and log in with the credentials you received by email after your sign-up request was approved.

C Or log in via the web app

Navigate to app.ecoscope.io/login in any modern browser and enter your credentials. All workflow features are available in the web app.

■ If you have already submitted the sign-up form for a user, do not submit it again — the support team will follow up by email once the account is ready.

For help, visit the EcoScope Help Center: earthranger-support.helpjuice.com/en_US/ecoscope

Prerequisites: Connect a Data Source

■ An EcoScope account and an active EarthRanger data source connection are both required before running any workflow. The data source only needs to be configured once.

If you have already connected your EarthRanger site, skip to Step 1.

A Open the Data Sources tab

Click **Data Sources**, then click **Connect Data Source**.

The Data Sources tab — click Connect Data Source.

B Select EarthRanger

Click **EarthRanger** in the Select Data Source Type dialog.

C Enter your credentials and connect

Fill in Data Source Name, EarthRanger URL, Username, and Password, then click **Connect**.

Select EarthRanger as the data source type.

Enter credentials and click Connect.

Credentials are not validated at setup time — authentication errors only appear when a workflow runs.

Step-by-Step Configuration

1 Add the Workflow Template

Click **Workflow Templates** → **Add Workflow Template**. Paste:

```
https://github.com/wildlife-dynamics/taaf_snake_sightings.git
```

Then click **Add Template**.

Pasting the taaf_snake_sightings GitHub URL into the Add Workflow Template page.

2 Select the Workflow

Click the **taaf_snake_sightings** card to open the configuration form.

The taaf_snake_sightings workflow card in the Workflow Templates list.

3

Set Workflow Details

Fill in **Workflow Name** (required) and optionally a **Description**.

TAAF

CancelSubmit

Set time range, select the TAAF data source, then click Submit.

Outputs

File	Description
taaf_snake_distribution_report.docx	Final combined report — cover, maps, summary table, per-species pages.
*_all_snakes_distribution.html	Interactive all-species distribution map.
*_observation_effort.html	Interactive observation effort choropleth.
*_species_richness.html	Interactive species richness choropleth.
map_.html	One interactive map per species.
map_.png	High-resolution screenshot per species, embedded in the Word report.
